

Tableau Server

Rapid Fire Business Intelligence

Data discovery, analysis and collaboration throughout your organisation

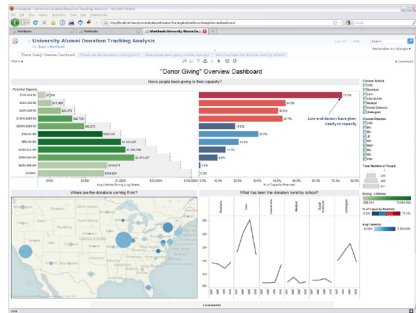

You want a way to share data with thousands of colleague's right in a browser. Do it in minutes with Tableau Server. It's rapid fire business intelligence and it's faster and easier than anything you've ever seen.

Interactive dashboards on the web

Combine all the data you need into a powerful dashboard. Publish it on the web so you can filter, highlight and drill down right in a browser. Embed it right in your team's workspace or Sharepoint site, or send it out via email. Update it in real time. And do it in minutes. Move from tables to interactive visualisations to dashboards in a few clicks.

Get out of the queue

Self-service business intelligence is the most effective kind. Business users create the reports they need to get answers themselves, today. They can change those reports as things change. Business users can get back to business and IT can get back to strategic IT.

"There are cases where we have reduced costs by hundreds of thousands of dollars as a result of the information we gained out of Tableau"

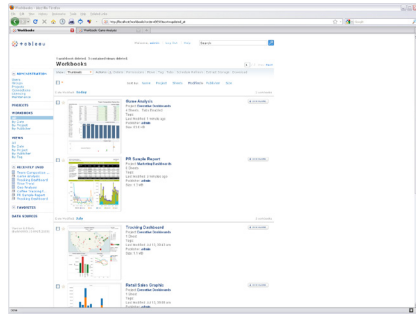

Matt Krzysiak, Chief Operations Officer
National Motor Club

Get blazing speed against massive data

We have turned your laptop into the equivalent of a multi-million dollar database. Bring your data into Tableau's high performance data engine and work with it at blazing speed. And do it with a click — there's no programming required. Tableau turns millions of rows of data into answers at the speed of thought.

Combine data sources with a click

Why should you need to draw lines and model your data to look at relationships between it? With Tableau you don't. You simply begin dragging and dropping to add a new data source and analyse relationships across the data.

Invite the facts to your meetings

You and your colleagues are discussing new trends in your business. But your reports don't answer your questions, and you leave your meeting with more questions than you went in with. So you go create more reports, then call another meeting. Which generates more questions and more reports.

Why not interact with data live during your meeting? With Tableau you can filter, sort, and discuss data on the fly. Ask and answer questions in the moment, face-to-face with your colleagues. That's real collaboration.

"Tableau products put incredibly powerful reporting and analytical tools in the hands of operating people — people who know their business and who can, given insightful information, make better decisions."

Bill Attridge, President
HTM
